Art Unit: 3682

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 2 and 3 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

With respect to claim 2, the limitation of "a larger sectional area" is vague and indefiniteness. That is, it is not understood what the "sectional area" defines. Where is this area? How is the section defined? In what way is the area measured? A more clear definition of what is meant by this sectional area is required for the claim to be definite.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Scheufler.

Scheufler discloses a half bearing constituting a cylindrical plain bearing for supporting a shaft for rotation when two of the half bearings are combined together, the half bearing having two circumferential ends (w) each of which has a plurality of circumferential grooves (1). The Scheufler reference does not mention any crush relief surface, and the embodiment of Figure 1 does not show any surface that could be considered a crush relief surface.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Katou et al.

Katou discloses a half bearing (Figure 2) constituting a cylindrical plain bearing for supporting a shaft for rotation when two of the half bearings are combined together, the half

bearing having two circumferential ends each of which has a plurality of circumferential grooves

(2). Katou does not disclose any crush relief surfaces.

Claims 2 and 3 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
